INTRODUCTION

Bring Out The Best Of Your Smile!

A shy smile hides your true self from the world. Problems with your teeth, gums and jaw create a barrier between you and your friends and family. If you're self-conscious about discoloured, mishappen or crooked teeth you may find yourself reigning in your smile or hiding it behind your hand. A smile makeover starts with a treatment plan tailored to your personal goals.

You tell us what areas you'd like to improve and we'll show you what treatment options and procedures are available. Feel confident you're in safe hands. We know how important it is for your treatment to be as quick and painless as possible-- we care about your overall health. That's why we have invested in the latest dental technology to ensure a swift diagnosis and a quick and accurate treatment which will have you back on your feet in no time.

Dr. Ameen Al-Obaidi

BONE REGENERATION

Regrowing Your Lost Bone

Periodontal disease or tooth abscess will cause bone loss around teeth, hastening tooth loss. Once teeth have been lost, supporting jaw bone disappears, resulting in a less and less comfortable situation.

Simple, predictable techniques are available to regrow your lost bone, to provide support for implants or dentures, and to improve esthetics.

This bone regeneration procedure do not require bone to be taken from another part of your body. Instead, membrane barriers are utilized over “calcium materials” to rebuild your lost bone.

The membrane barrier prevents the gum tissue from growing into the area of bone loss, and protects the underlying calcium materials and forming bone.

These materials are eliminated by your body as the new bone regenerates, providing the following advantages:

- Regeneration of bone to place implants
- Regeneration of bone to provide greater stability for full dentures
- Regeneration of bone to improve esthetics
- Patient age, or the length of time bone has been missing, are not negative factors when considering bone regeneration therapy.

This method of bone regeneration is highly predictable, and often results in complete regeneration of jaw bone in the area being treated.

Normal bone contours and quantity have been compromised.

A membrane barrier is placed over “calcium materials” in the desired area of the bone regeneration.

New bone is regrown beneath the membrane barrier.

Large gap where a significant bone loss in the upper anterior area.

Following use of “calcium materials” and a barrier membrane, lost bone has been regenerated

BONE REGENERATION

Commonly Asked Questions

Will the bone regeneration procedure hurt?

Only *Lidocaine* is necessary to perform a tooth removal and ridge preservation procedure. You feel nothing once the area has been numbed. This procedure will not cause you to miss work.

How long does a bone regeneration procedure take?

The placement of regenerative materials to regrow your lost bone takes approximately 1 hour. If dissolving stitches are not utilized, the stitches are removed 7-10 days later in a 10 minute visit. An x-ray is taken a few months after bone regeneration for evaluation.

Does the membrane barrier remain in my mouth?

If a dissolving membrane is utilized, it will be gone a few weeks after the procedure. If a non-dissolving membrane is used, it will be removed in a minor procedure which takes 10 minutes.

What is the cost of the procedure?

The cost of the bone regeneration procedure will vary with the situation. Your doctor will discuss this with you before proceeding with any treatment.

How well does ridge preservation work?

The bone regeneration procedure is highly predictable. It rebuilds lost supporting jaw bone, resulting in bone for proper implant placement and greater bone to help support a full denture, and improve esthetics, if necessary.

TESTIMONIALS

What Our Patients Have To Say

“I have bad anxiety and I don’t like going to the dentist. But I went to Sky Dental and the whole staff is amazing. The atmosphere there is very welcoming. My anxiety was very low the day I went. Now I can get the rest of my teeth fixed. I highly recommend Sky Dental.”

KIM

“

My veneers are beautiful! I couldn’t be happier! It took me a while to get used to the way they felt in my mouth, since my teeth were so worn down, but once I did, amazing! You are an incredible dentist! You also have an amazing staff.”

SOPHIA

“

I brought the family (2 adults, 2 kids) to Sky Dental. They did an amazing job with all our teeth. The staff is kind, welcoming, professional, gentle and very thorough. My daughters had a great first dental experience. Thanks again so much!”

JAIME

“

Very friendly staff and welcoming environment. Thank you Dr. Ibrahim for providing a great experience.”

CURTIS

MEET YOUR DENTIST

Dr. Ameen

Dr. Ameen graduated from Baghdad University in 1997 with a Bachelor degree in Dental Surgery. He finished a post graduate diploma in dental surgery MFDS from Glasgow in 2010. He was interested in implant surgery and cosmetic dentistry, therefore, he finished his fellowship and continued his clinical and theoretical research, finishing his diploma, in placing and restoring implants. In a nutshell, this prestigious diploma means that he has completed a ton of implants with a very high success rate, and has put in countless hours of continuing education to perfect his craft. Dr. Ameen is happy to be a part of his patient's esthetic journey by helping them restore smiles. He finished his DDS in Canada after passing the NDEB exam in Western Ontario.

Dr. Ameen has had a privilege of working in four continents, which has enabled him to connect and develop great communication skills with patients from all walks of life. He is the owner of four practices; Hamilton (Barton Dental Centre), Mississauga (Tomken Centre Dentistry), Thunder Bay (Redwood Dental Centre), and now recently Thunder Bay (Sky Dental Centre).
